The Concept

Hang-A-Plan is a world-renowned name that continues to lead way to more efficient means of storing large quantities of plans and drawings.

The Hang-A-Plan vertical filing system of Super Continuous Binders is a superior method of filing and saves time and space compared with drawer systems. With 75% saving on retrieval time and an 80% saving on floor space it will amount to big cost savings.

Products are manufactured to the highest quality standards and with well-designed features and options to satisfy different requirements for size, capacity, cost and ease of use.

Worldwide Patents

Hang-A-Plan trolleys and binders are protected by invention and design patents worldwide.

Areas of Use

Hang-A-Plan filing systems provide more efficient means of storing large quantities of plans and drawings.

The plan filing system is also useful for storing other large flat sheets such as maps and charts, posters and prints, or even sample swatches of wall paper, gift wrapping paper, curtain fabrics, dress cloths and carpets.

Applications

Hang-A-Plan filing systems are used extensively by people in the building and construction industry, engineers, surveyors, councils and other public service utilities, oil companies, hospital and building maintenance personnel, manufacturing firms, as well as design houses, architects, draftsmen and graphic artists.

The Hang-A-Plan filing systems have useful applications in schools and showrooms for display of maps, charts, posters, fabrics etc.

10 Year Guarantee

The drawings may be on plain paper, blueprints, vellums or tracing paper. In whatever form, Hang-A-Plan provides a quality filing system with many well-designed features that carries a 10-year guarantee for all the sturdy metal components of the Hang-A-Plan Super Continuous friction binder.

If the metal components prove defective under normal use, Arnos replace or repair them free of charge.

HANG-A-PLAN FILE BINDERS

Hang-A-Plan binders are manufactured from premium grade aluminium with all metal components. Keep sheets flat and guard against tears and wrinkles. Simple to load and easily accessed.

Binders are supplied in silver or black and carry a 10-year guarantee.

The binders have nylon end-caps to protect furniture from scratches, heavy duty die-casting metal wing-nuts with double-sided stainless steel spring clip; adjustable index feature of 75mm (3") label and protective clear plastic window. Binders are fitted with either silver anodized aluminium or black powder coated clamps.

The U-channel section controls the opening and closing of the clamps and produces a continuous even grip for the full length of the binder. The even grip makes it possible for the binder to clamp a set of prints of any size securely up to the maximum length of the binder.

Front Loader Binder

Front Loader Binder with Handle

Made from strong lightweight aluminium with a convenient carry handle. The handles have been die-cast, polished and electro statically painted and a metal "stop" button ensures that binders are securely and evenly stored on the racking system.

The Hang-A-Plan Super Continuous Front Loader Binders are suitable for both Front Loader and Drop Mount systems. The tough Super Continuous Binders are made in 4 sizes from 18" - 36" long for A0, B1, A1 and A2.

Drop Mount Binder

Drop Mount Binder. No Handle

A lower priced binder without carry handle in sizes A0 and A1. The A0 binder holds up to 100 sheets and A1 binder up to 120 sheets. This binder still has the strong super continuous grip but, without the handle, is only suitable for the Drop Mount racks and trolleys.

Binder Capacity

Each binder has a 25mm (1") capacity and will hold between 100 and 150 sheets, depending on their size and thickness, and up to a comfortable maximum carrying weight of 9kg (20lb.).

Ease of Use

The suspension filing system ensures that the sheets are always flat and guard against tears, wrinkles, curls and folds, and requires no expensive binding strip.

Simple to load by laying the binder on a flat tabletop, loosening the wing nuts, sliding in the sheet and then tightening the wing-nuts again. **Finger tightness with the friction binder provides all the clamping strength required.** Drawings are then systematically filed and in that position can be referenced or accessed as easily as flipping through the pages of a book or loose-leaf binder.

HANG-A-PLAN RACKS & TROLLEYS

There are two systems to rack the Hang-A-Plan file binders.

- Front Loader system – well featured system with center point hanging.
- Drop Mount system – a more economical system with two-end point hanging.

All racks are nylon coated for a tough, anti-corrosive finish and are supplied in black only.

The options for racking the file binders range from 5 to 25 binder capacity.

Front Loader Racks & Trolleys

The **Premium Trolleys** have a load capacity of 125kg and are fitted with a fifth wheel for improved mobility. A tool is provided for easy assembly. The Premium trolley is available in two sizes each with a 25 binder capacity. The large trolley for A0 and B1 binders and the smaller trolley for A1 and A2 binders.

The **General Trolley** is a lower cost option. It has a 15 binder capacity and a load capacity of 100 kg. The General trolley supports all sizes of front loader binders.

The **Wall Rack 1200** is height adjustable for any length drawings. The Rack has a 10 binder capacity and holds all sizes of front loader binders. The wall mounting systems occupy no valuable floor space and will hold any length sheet.

Drop Mount Racks & Trolleys

The **Drop Mount Trolley** has a simple drop on/lift off system for binders with or without handles. The trolley is available in two sizes to support A0 and A1 binders and has a 15 binder capacity with a maximum load capacity of 100 kg. Self-assembly with tool provided.

The **Drop Mount Wall Bracket** holds 5 binders and is supplied with template for fixing to a wall. Suitable for any sized binders.

Hang-A-Plan Stand

The General Front Loader Trolley and the Drop Mount trolleys are designed for transporting a maximum capacity of 100kg (1,000 A0 size sheets or 2,200 A1 size sheets). The Premium Front Loader trolleys are designed for a 25% larger load.

The wheels enable the storage system to roll easily to the point of use. If stationary racking system only is required, the wheels can be dispensed with and capacity increases to 300kg (or 3,000 A0 size sheets) on the Premium Front Loader trolley.

Space Saving Systems Shelf

Premium Front Loader Trolleys can be supplied with or without systems shelf. The Systems Shelf offers additional storage capacity for specification sheets or associated files.

Self Assemble

For convenience of on-site to off-site transport, all Hang-A-Plan racking systems are supplied knocked down for self-assembly with the aid of the one simple tool provided.
